This data was collected by Radon Detection Specialists, Inc. between June 1999 and December 2008. It is not to be used or reprinted without permission. It is intended for general reference only and cannot be used to predict the radon level in a home in any town. The data collected represents more than 25,000 tests and does not contain invalid tests or post-mitigation tests. In unincorporated areas and in areas where town names and zip codes overlap, you should consider data from neighboring communities.

This data was collected by Radon Detection Specialists, Inc. between June 1999 and December 2008. It is not to be used or reprinted without permission. It is intended for general reference only and cannot be used to predict the radon level in a home in any town. The data collected represents more than 25,000 tests and does not contain invalid tests or post-mitigation tests. In unincorporated areas and in areas where town names and zip codes overlap, you should consider data from neighboring communities.
